

GReddy SCION TC e-manage Ultimate KIT

※ This kit is tuned for vehicles with the GReddy Scion Tc Bolt-On Turbo Kit only

Injectors Installation

1. Remove the fuel rail assembly with injectors.
2. Grind the fuel rail as shown to clear the injector connectors .
Make sure not to grind too much. Clean the rail thoroughly after grinding

3. Install the 440cc injectors and reinstall the fuel rail.
4. Cut the factory injector connector wires and solder in the provided connector harness to the factory injector wires.

E-manage ultimate Installation

Please read the entire e-manage ultimate installation manual before installing.

Starting the Engine

1. Check all the hoses and wires connection, then reconnect the negative side of the battery.
2. Turn the ignition to "ON" position 2-3 times to get fuel pressure. Then, check the injectors and the fuel rail for any fuel leaks.

***Repair any fuel leaks before starting the engine. Starting the engine with a fuel leak can cause fire in the engine compartment and can be very dangerous.**
